JOSHUA GLASER

SOFTWARE QUALITY ENGINEERING AND MANAGEMENT

Greater Chicago, IL | (773) 263-5466 | josh-glaser@outlook.com | linkedin.com/in/joshglaser1/

PROFESSIONAL SUMMARY

QA and test automation leader with over ten years of experience. Most recently ran a team scaling from 8 to 20 test engineers on a multi-year project moving all global UPS payroll vendor data in-house on Google Cloud. Built the automation framework, set testing standards for PII data, and introduced GitHub Copilot workflows that doubled team code delivery. Earlier work includes leading a remote QA team at Lifelines Neuro and eight years of test automation at Encyclopedia Britannica.

Leadership & Methodology:
Agile/Scrum Leadership, Cross-Functional Team Management, Strategic Technical Governance & Road-mapping, Executive Stakeholder Alignment, GenAI Strategy & AI-Assisted Engineering, Risk Management & PII Compliance, Resource Allocation & Velocity Optimization, Remote Team Mentorship.

CORE SKILLS

Languages:
Python, Java, SQL, XML, CSS, Ruby, C#.

Frameworks & Tools:
TestNG, Selenium, Appium, Robot Framework, Playwright, Postman, REST API, Kleopatra, Cucumber.

Cloud & Databases:
Google Cloud Suite (GCS: Storage, BigQuery, Cloud Run, Spanner), Azure DevOps (ADO).

Software & IDEs:
VS Code, GitHub Copilot, Jira, Confluence, DataDog, Git, Slack, PyCharm, Apache JMeter, XCode, CI/CD Pipelines, Claude Code.

EXPERIENCE

Sparq, Inc. | Atlanta, GA (remote) Apr 2023 - Oct 2026

Senior Consultant, Test Automation

Project: UPS Corporate Payroll Integration & Cloud migration via GCS

+ Set the technical roadmap and testing standards for a multi-year project moving all global UPS payroll vendor data in-house.
+ Lead 8 to 20 automation and manual test engineers, covering sprint execution, resource allocation, and delivery in Azure DevOps, plus daily Scrum.
+ Selected and built a Java/TestNG and Google CLI automation framework from scratch. Data validation spans GCS Storage, BigQuery, Cloud Run, and Spanner and targets 100% data fidelity.
+ Set engineering benchmarks for GitHub Copilot in VS Code and guided the team's custom Copilot skills, prompts, and automated test data generation, which cut manual cycle prep time by 50%.
+ Own the data security testing protocols for large volumes of PII. Required encryption standards and automated CI/CD security gates.
+ Serve as the main technical and delivery contact between Sparq and UPS leadership, reporting milestones as business risk, timelines, and resource forecasts.

Lifelines Neuro | Louisville, KY (hybrid) Oct 2021 - Apr 2023

Sr. Software QA Analyst / Team Lead

+ Led five overseas QA engineers through Agile sprints.
+ Replaced fully manual testing of the desktop application for a portable EEG device with automation built on WinAppDriver, Appium, and a Selenium-based command library wrapped in Python.
+ Maintained a stack of EEG test hardware connected to the data collection software, used to physically test firmware and peripheral device interaction so devices stayed reliable in the field.
+ Added Robot Framework to the scripts for logging and readability, and trained engineers moving onto the framework.

Encyclopedia Britannica, Inc. | Chicago, IL Jun 2013 - Oct 2021
(2013-2015: on site, 2016-2021: remote)

QA Technical Lead / Sr. Automation Engineer

(Promoted continuously from QA Automation Engineer & Product Team Lead)

+ Ran daily Scrum across QA, UX, and development.
+ Automated testing for the main institutional web products, including school.eb.com, which reduced manual testing and cut regression cycles by a full week.
+ Built a page performance test from HAR output that aggregates request response times. Ran back-end load scripts and server monitoring in DataDog.
+ Introduced mobile web automation with Appium and native Xcode iOS simulators, wrote the documentation, and trained engineers on it.
+ 2013–2014: Wrote unit and integration test plans and reusable Python/Selenium scripts for consumer products.

EDUCATION

DePaul University | Chicago

Bachelor of Science (BS) in Information Technology

Concentration: Object-Oriented Programming Languages

PROFILE

https://josh-glaser-portfolio.vercel.app/

SPECIAL PROJECTS

+ **GenAI test automation (Sparq):** Built a workflow using GitHub Copilot and the ADO MCP server to train engineer workspaces from application requirements and produce a reusable project knowledge base. Wrote Copilot skills, prompts, and constraints that draw on it to generate reliable test automation code, plus the standards for using them safely. Used Copilot to build a test data factory with a simple interface, saving hundreds of hours of manual data creation.
+ **Disaster recovery (Britannica):** After a major staging mishap, cloned thousands of mis-uploaded content packages to production with front-end automation, saving hundreds of hours of manual work.
+ **Account ingestion (Britannica):** Wrote a front-end script fed by spreadsheets that mass-submitted user information through web forms, giving thousands of incoming students and teachers immediate access.
+ **Archival compliance (Britannica):** Built an annual headless browser and PDF automation that securely retrieves, locks, watermarks, and archives every digital article on britannica.com for national library distribution.
